Recruit-AI — Problem Framing Document

Transforming startup hiring from manual triage to intelligent AI orchestration.

Made with GAMMA

Context & Problem Description

The Challenge

Small to mid-sized tech startups receive 200–500 resumes per role, lacking dedicated recruiting infrastructure. Founders or a single Talent Manager oversee hiring alongside core operations.

Time Drain

6-10

Hours Weekly

Manual resume screening

3-5

Hours Weekly

Interview scheduling

Critical Bottlenecks

No Semantic Intelligence

Difficulty in extracting context beyond keywords.

Subjective Decisions

Bias and inconsistency in candidate evaluation.

Manual Coordination

Scheduling, feedback, and communication overhead.

Context Switching

Recruiters juggle multiple tasks, leading to errors.

Increased applicant volume from remote hiring and AI-generated resumes exacerbates these issues. For a startup, hiring delays or poor hires directly impact velocity and runway.

Persona — Sarah (Talent Acquisition Manager)

Profile

Company: 50-person SaaS startup

Role: TA Manager / Founder Recruiter

Emotional Drivers

- Burnout from overwhelming workload
- Pressure to hire faster
- Anxiety over missed candidates

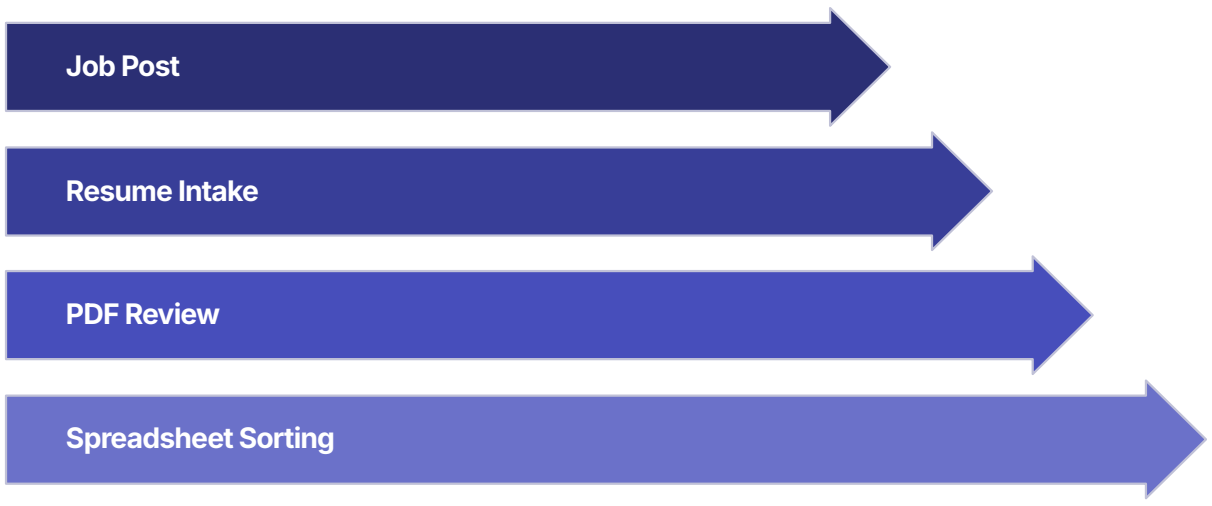
Goals

- Hire high-quality engineers fast
- Reduce admin workload
- Ensure fair evaluation

Frustrations

- Hundreds of resumes to review
- Spreadsheet shortlisting chaos
- Manual scheduling nightmares
- Fear of missing top talent

Current Workflow



Sarah's workflow is fragmented and inefficient, leading to constant context switching and delays.

Market Opportunity

1.5M

SMBs

in target segment

$270M

Serviceable Market

for recruitment tech

A significant market gap exists, as current tools often lack autonomous, continuous screening and intelligent scheduling capabilities, leaving startups underserved.

Why Agentic AI

Traditional ATS systems rely heavily on manual human input for screening and scheduling. Recruit-AI, powered by agentic AI, leverages intelligent automation to proactively manage the entire recruitment pipeline, driving continuous autonomous execution unlike traditional human-driven workflows.
