Recruit-AI: Metrics & Product Roadmap

Strategic Overview

Recruit-AI automates early-stage candidate evaluation, significantly reducing time-to-hire, enhancing candidate quality, and optimizing recruiter capacity for small and mid-sized tech teams.

Success Metrics

North Star Metric: Time-to-Hire Reduction

Directly impacts recruiter capacity, hiring velocity, and organizational growth.

KPI: Screening Efficiency

Target 60–70% decrease in manual resume review time.

KPI: Candidate-Role Fit

Improve shortlisting accuracy by at least 40% with AI evaluation.

KPI: Recruiter Productivity

Save 5–7 hours per recruiter per week.

Product Roadmap: Phased Innovation

Our iterative roadmap ensures rapid time-to-value, building towards a comprehensive, enterprise-grade AI-powered hiring decision platform.

01

Phase 1: MVP (Current)

Validate core value proposition by providing AI-generated match scores and recommendations.
Business Impact: Immediate reduction in manual screening effort.

- JD + Resume text analysis
- AI-generated match score (0–100)
- Interview / Hold / Reject recommendation

02

Phase 2: Near Term (1–2 Months)

Enhance usability and broaden AI capabilities with bias detection and multi-candidate evaluation.
Business Impact: Improved fairness, efficiency, and recruiter communication.

- PDF resume upload and parsing
- Bias detection and fairness checks
- Multi-candidate evaluation for a single role

03

Phase 3: Growth (3–6 Months)

Integrate with existing HR tech stacks and provide advanced analytics for data-driven hiring.
Business Impact: Streamlined workflows, deeper insights, and consistent talent identification.

- ATS integrations (Greenhouse / Lever-style)
- Recruiter dashboard with funnel analytics
- Batch resume processing

04

Phase 4: Scale (6+ Months)

Focus on enterprise-level security, compliance, and customization for large organizations.
Business Impact: Secure, auditable, and tailored solutions for complex corporate environments.

- Enterprise authentication and permissions
- Audit logs for hiring decisions
- Custom scoring rubrics per organization

Expected Impact Summary

Recruit-AI aims for a 40-50% improvement in overall hiring efficiency, translating to a 30-45% reduction in average time-to-hire and significant cost savings of up to 25% per hire.
